Summary —

Senior Full Stack Developer & Technical Team Lead with **5+ years of experience** delivering **50+ projects** across ecommerce, SaaS, and automation for clients in Australia, Malaysia, USA, Africa, Canada, UAE, and India. Specialized in **vibe coding** using AI-powered platforms (Cursor, Bolt, Copilot, Antigravity) and building full-stack automation systems at scale.

Technologies

Frontend	React.js, JavaScript (ES6+), HTML5, CSS3		AlmaLinux
Backend	Node.js, REST APIs, Webhooks	Vibe Coding	Cursor, Bolt, GitHub Copilot, Antigravity
Databases	MySQL, MSSQL	AI Tools	GPT, Claude, DeepSeek
Ecommerce	Shopify, WooCommerce, WordPress	Automation	Meta WhatsApp API, Razorpay, CRM
Cloud	AWS, Azure, Vultr, VPS, Ubuntu,		Pipelines

Experience

Working at Nowgray IT Services as a Team Lead, Full Stack Developer, and Server Manager

Team Leadership & Project Delivery

- Led a team of 4–5 developers, managing workflows, code reviews, deployments, and client communication across **50+ international projects** simultaneously.
- Scoped and delivered projects for clients across Australia, Malaysia, USA, Africa, Canada, UAE, and India — handling everything from requirement gathering to post-launch support.
- Established development workflows using **vibe coding platforms** (Cursor, Bolt, Antigravity, GitHub Copilot) to dramatically reduce time-to-delivery on complex builds.

Automation & SaaS Systems

- Architected and deployed **full-stack automation platforms** including WhatsApp chatbot pipelines, AI-driven email nurturing workflows, payroll engines, and real-time inventory synchronization systems.
- Integrated **Meta WhatsApp Business Cloud API** for multiple SaaS clients — including onboarding flows, AI chatbot response systems, and bulk messaging automation.
- Built subscription billing and payment automation using **Razorpay**, including plan management, webhook-based event handling, and renewal notifications.

Backend & Infrastructure

- Designed scalable backend architectures with **Node.js, REST APIs, MySQL, and MSSQL** — including webhook integrations, cron-based schedulers, and real-time data pipelines.
- Managed **VPS and cloud infrastructure** across AWS, Azure, Vultr, Hostinger, Afrihost, Genex, Hostek, and Fozzy on Ubuntu and AlmaLinux environments.
- Administered servers via **cPanel, Plesk, and Webuzo** — handling SSL, DNS, deployments, and environment configuration for 20+ live production servers.

Ecommerce & CRM Development

- Built and customized **Shopify and WooCommerce** stores with custom themes, plugin integrations, payment gateways, and automated order workflows.
- Developed CRM and reporting systems with dynamic dashboards, data export (PDF/CSV), and role-based access control for multi-branch business operations.

Projects — 2 of 50+ delivered

Office Management & Payroll Automation System

oms.ecomm11.com

Full Stack — Node.js, React.js, MySQL, REST APIs, Desktop Agent

- Built a comprehensive **employee monitoring and office management platform** used by a multi-department organisation to track workforce productivity and automate HR operations end-to-end.
- Developed a **desktop tray agent** that silently runs on employee machines — capturing real-time activity logs, idle time, screenshots at defined intervals, and login/logout timestamps, all synced to a central dashboard via REST APIs.
- Implemented an **attendance management system** with clock-in/clock-out tracking, late-mark detection, leave application workflows, and manager approval flows — fully replacing manual HR registers.
- Built a **payroll automation engine** that calculates monthly salaries dynamically based on attendance records, leaves taken, overtime hours, and custom deduction/bonus rules defined per employee or department.
- Designed a **task management module** allowing managers to assign tasks, set deadlines, track progress, and receive completion reports — with automated reminders sent to employees via the platform.

- Created a **reporting dashboard** with role-based access (Admin, Manager, Employee) showing real-time productivity scores, attendance summaries, and exportable payroll reports in PDF and CSV formats.

AI WhatsApp & Email Lead Automation Platform

 [leads-automater.nowgray.live](https://github.com/leads-automater/nowgray.live)

Full Stack SaaS — Node.js, React.js, Meta Cloud API, Razorpay, AI/LLM Integration

- Built a **multi-tenant SaaS platform** enabling businesses to automate their entire lead communication cycle across WhatsApp and email — from first contact to conversion — without manual intervention.
- Integrated **Meta WhatsApp Business Cloud API** with a full onboarding system, allowing clients to connect their own WhatsApp Business accounts, configure message templates, and go live within minutes.
- Developed an **AI chatbot engine** powered by LLM integrations (GPT/Claude) that handles incoming WhatsApp messages intelligently — answering FAQs, qualifying leads, and routing conversations to human agents when needed.
- Built **automated follow-up workflows** with configurable drip sequences — sending scheduled WhatsApp messages and emails based on lead status, time delays, and user-defined trigger conditions.
- Implemented an **AI template generation system** where users describe their campaign goal in plain text and the platform generates ready-to-use WhatsApp message templates and email copy instantly.
- Integrated **Razorpay subscription billing** with plan tiers, automated renewal handling, webhook-driven status updates, and usage-based feature gating across all tenant accounts.
- Designed a **campaign analytics dashboard** showing delivery rates, open rates, response rates, lead conversion metrics, and chatbot interaction logs — exportable per campaign or date range.

Hobbies & Interests

- Exploring new AI tools, LLMs, and vibe coding workflows
- Building side automation scripts and open-source tools
- Following developments in AI-assisted software development
- Sharing dev tips, automation hacks, and tech content online
- Strategy and simulation gaming
- Fitness, gym training, and outdoor activities
