7. Quick-Reference Cheat Sheet

This guide is written for sales conversations — no technical jargon. Use it to explain what the product does, how a client's team would use it day-to-day, and how to answer common prospect questions.

## 1. The 60-Second Pitch

**Connexify is a single platform that replaces the CRM, the meeting-notes app, the email marketing tool, the automation tool, and the HR attendance sheet** that a growing sales team would otherwise stitch together from five different vendors.

Everything a sales, marketing, or operations team needs — capturing leads, running the sales pipeline, sending quotations and invoices, running email campaigns, automating repetitive follow-ups, and even tracking staff attendance and leave — lives under one login, one company account, and one set of reports.

**Lead & Deal  
Management**

**AI Meeting Assistant**

**No-Code  
Automation**

**Email & Campaigns**

**Quotes & Invoices**

**HR: Attendance & Leave**

**The headline differentiator:** Connexify's built-in **AI Meeting Assistant** automatically joins a customer's sales calls, writes the transcript, and produces an AI summary with action items — with zero manual note-taking. Most competing CRMs don't have this natively; it's usually a \$20–\$50/user/month add-on from a separate vendor.

## 2. How a Customer's Account Is Structured

When you're explaining the platform to a prospect, this is the mental model to give them — it directly answers "can our different departments use this without stepping on each other?" and "can we control who sees what?"

### Company — the customer's account

This is the top-level container a business signs up under. It holds the company profile (name, industry, currency, business hours), and it's the billing/ownership boundary — one company's data is never visible to another company. Whoever signs up first automatically becomes the **account owner (Company Admin)**, with full control to invite the rest of the team.

### Workspaces — how departments stay organized without separate accounts

Inside one company, work is split into **Workspaces** — think of these as separate departments or teams (e.g. "Sales — East Region," "Marketing," "Customer Support"). Each workspace has its own leads, pipeline, campaigns, and settings, so a Marketing team and a Sales team don't clutter each other's views — but leadership can still see everything roll up under the one company. A team member can be added to more than one workspace if their role spans departments.

### Users & permissions — control down to the individual

Every teammate gets their own login. Access isn't just "admin vs. everyone else" — permissions are granted **per person, per feature** (view/create/edit/delete, independently, for leads, deals, meetings, documents, etc.), so a manager can be given full visibility while a new sales rep only sees the leads assigned to them. Inviting a teammate is a simple email-link flow — no manual account setup on the backend.

**Talking point for prospects:** "Your whole company gets one account. Inside it, each of your teams — sales, marketing, support — works in its own workspace with its own pipeline and its own leads, but your leadership gets one unified view across all of them. And you control exactly what each person on your team can see and touch, down to individual features."

## 3. What's Inside the Platform — Every Module Explained

### Lead Management

Every prospect enters the system as a **Lead** — whether typed in manually, imported from a spreadsheet, or captured automatically from a website form. Connexify checks for duplicates automatically before creating a new record, so reps never work the same contact twice. New leads can be auto-assigned to the right rep using configurable rules (by source, territory, or simple round-robin), and every lead gets a live "engagement score" that rises as the prospect opens emails, responds, or books meetings — so reps know who's actually warm.

**Also included:** custom fields (capture whatever your industry needs), tasks & follow-up reminders per lead, a full activity timeline, and bulk import/export.

### Deals & Opportunities — the Sales Pipeline

Once a lead is qualified, it becomes an **Opportunity** that moves through a visual funnel (e.g. Qualified → Proposal → Negotiation → Won/Lost). When it's time to negotiate specifics, a **Deal** is opened underneath it to track the pipeline stage, value, and payment schedule — giving sales managers a clean, forecastable view of what's likely to close and when.

### Meetings & AI Assistant Signature Feature

When a rep schedules a Google Meet call through Connexify, the customer can opt in to have Connexify's **AI bot automatically join the call**, listen in, and produce a full transcript in real time — no plugin or manual recording needed. After the call, the platform automatically generates an **AI-written summary with action items**, saved straight to the lead's record as a downloadable document. Reps spend zero time on note-taking and never lose a follow-up commitment made on a call.

### Workflow Automation (No-Code)

A drag-and-drop visual builder lets admins automate the busywork without writing a single line of code: "When a lead comes in from the website, wait 5 minutes, then send a welcome email, then assign it round-robin to the sales team, then create a follow-up task in 2 days." Automations trigger off real events (new lead, updated lead, campaign stage change, payment received) and can branch on conditions and include time delays — this is what lets a small team run processes that would normally require a much bigger headcount.

## Email, Templates & Gmail Integration

Reps can connect their Gmail inbox directly, sending and receiving lead emails from inside Connexify with full thread history. An **AI writing assistant** drafts email templates on request ("write a follow-up email for a lead who went quiet"), and every email sent — whether one-off or a bulk template blast — is automatically tracked for opens and link clicks, so reps know who's actually reading. Drip email sequences can be set up to nurture leads automatically over days or weeks.

## Campaigns

Marketing teams can stage a batch of leads into a named campaign (e.g. a trade show or ad push), track each one through custom campaign stages, assign them across a campaign team, and see a live funnel report of conversions and revenue collected — separate from, but connected to, the main sales pipeline.

## Quotations & Invoices

Once a deal is ready to close, sales reps can generate a professional, branded **quotation** directly from the deal — line items, discounts, taxes, and totals calculated automatically — and convert it straight into an **invoice** when the customer agrees, with auto-numbered document IDs per company. Documents print cleanly to PDF for sending or filing.

## Web Forms & Landing Page Capture

A drag-and-drop form builder lets a customer create lead-capture forms and drop them onto their own website (via a simple embed snippet) or share them as a standalone link — every submission flows straight into Connexify as a new, auto-assigned, auto-scored lead, with spam protection built in.

## HR: Attendance & Leave Management

Beyond sales, Connexify covers core team operations: staff check in/out, managers see daily/monthly attendance summaries, and employees can request leave against configurable leave types and company holiday calendars — with automatic balance tracking and a manager approval flow. A nice extra for customers who want one system for both selling and running their team.

## Team, Roles & Permissions

Account owners invite teammates by email, assign them to the right workspace(s), and control exactly what each person can see and do — all without needing IT involvement.

## Analytics Dashboard

Leadership gets a live, always-current dashboard: pipeline value, win rates, lead sources that convert best, team activity leaderboards, and dedicated reports for meetings, tasks, campaigns, sales documents, and HR — all filterable by date range and by workspace.

## 4. A Day in the Life — The Customer Journey Through Connexify

---

This is the story to walk a prospect through — it shows how the modules connect into one continuous flow, rather than feeling like separate tools bolted together.

- 1 **A visitor fills out a web form** on the customer's website (or a lead is imported/entered manually).
- 2 **Connexify creates the lead automatically** — checks for duplicates, scores it, and assigns it to the right rep via the customer's own rules.
- 3 **Automation kicks in** — a welcome email fires immediately, and a follow-up task is scheduled for the rep, with zero manual setup per lead.
- 4 **The rep works the lead** — calls, emails (tracked for opens/clicks), and logs notes, all from one screen.
- 5 **A discovery meeting is booked** via Google Meet, and the customer opts in to the AI bot joining the call.
- 6 **The AI assistant transcribes the call live** and, right after it ends, delivers a written summary with action items straight to the lead's record.
- 7 **The lead is converted to an Opportunity** and moves through the sales funnel stages.
- 8 **A Deal is opened** to negotiate value and terms; the rep sends a branded **Quotation** straight from the deal.
- 9 **The customer accepts** — the quotation converts to an **Invoice** in one click, and payment is logged against the deal.
- 10 **The deal closes as Won**, and the result is reflected instantly on the manager's **Analytics Dashboard** — no end-of-week manual reporting.

## 5. Why Customers Choose Connexify Over a Typical CRM

| What most CRMs make you buy separately        | What Connexify includes out of the box                                 |
|-----------------------------------------------|------------------------------------------------------------------------|
| CRM / pipeline tool                           | ✓ Included                                                             |
| Meeting recording & note-taking add-on        | ✓ Built-in AI Meeting Assistant (auto-join, transcript, summary)       |
| Zapier / automation subscription              | ✓ Included no-code Workflow Builder                                    |
| Email marketing / sequencing tool             | ✓ Included (templates, AI writing assistant, drip sequences, tracking) |
| Form builder / landing-page lead capture tool | ✓ Included Web Form Builder + embeds                                   |
| Quoting / invoicing software                  | ✓ Included Quotations & Invoices module                                |
| HR attendance/leave system                    | ✓ Included Attendance & Leave module                                   |
| BI/reporting tool for sales data              | ✓ Included Analytics Dashboard                                         |

**The pitch in one line:** "You're not buying a CRM and then bolting on five other subscriptions — everything is already connected, in one login, for one team to manage."

## 6. Security & Data Privacy — Answering the "Is Our Data Safe?" Question

- **Strict data isolation:** every customer's data lives under their own Company account and is never visible to another customer — enforced on every single request, not just in the interface.
- **Granular, per-person permissions:** access isn't all-or-nothing. Admins decide exactly which features each teammate can view, create, edit, or delete.
- **Secure login sessions:** industry-standard token-based authentication with automatic session expiry, and every session can be instantly revoked (e.g. if an employee leaves the company).
- **Full audit trail:** every meaningful change made in the system is logged — who did what, and when — supporting compliance and internal review.
- **Encrypted credentials:** passwords are never stored in plain text; industry-standard one-way hashing is used throughout.

## 7. Quick-Reference Cheat Sheet

Keep this page handy in a live sales call — one line per module, framed as the problem it solves.

| Module                 | Problem It Solves                                               | Who Uses It Most      |
|------------------------|-----------------------------------------------------------------|-----------------------|
| Leads                  | "We keep losing track of new prospects and who's following up." | Sales reps & managers |
| Deals & Opportunities  | "We can't forecast what's actually going to close this month."  | Sales managers        |
| Meetings & AI          | "Nobody writes down what was agreed on sales calls."            | Sales reps            |
| Workflow Automation    | "We keep forgetting manual follow-up steps."                    | Ops / admin           |
| Email & Gmail          | "We don't know if prospects are even opening our emails."       | Sales & marketing     |
| Campaigns              | "We can't track ROI on a marketing push."                       | Marketing team        |
| Quotations & Invoices  | "Quoting takes too long and looks unprofessional."              | Sales reps & finance  |
| Web Forms              | "Our website doesn't feed leads into our CRM automatically."    | Marketing team        |
| HR: Attendance & Leave | "We track attendance and leave on spreadsheets."                | HR / office managers  |
| Team & Permissions     | "We can't control who sees sensitive data."                     | Company admin / IT    |
| Analytics Dashboard    | "Leadership has no real-time visibility into the business."     | Founders / leadership |
